KARA system

KARA based on the design concepts of the K1 stadium system enables an optimal performance in all settings. Many improvements have been made to the previous line source including significant improvements to horizontal directivity control, bandwidth extension, improvements to coherence, flexible vertical coverage and an operating mode which freely creates a low frequency contour. KARA provides its users with a listening experience they have never felt before using WST® (wavefront sculpture technology) from L-Acoustics.

System Diagram

	Product Name	Manufacturer	Model No.	Standard Price
