

Product **compact array speaker HX-7**

The new TOA compact array speaker HX-7 has a structure unique to TOA called the “four module integrated line array speaker” and so is capable of flexible angle adjustment even with stand-alone use. This adopts two 5.5-inch woofers, a 1.4-inch compression driver and a wavefront control throat unique to TOA in one module. This boasts overwhelming greater drive capabilities than the traditional HX-5 model. This is a speaker system that is capable of being installed in a wide variety of settings – from events to mid-size arenas.
