

Product **multi cellular loudspeaker array MLA**

The MLA system which has been a big topic recently has been used in numerous festivals and concert tours. The combination of previously unseen ground-breaking optimization software and multi-cellular control technology achieves consistent SPL and premium sound quality all through venues. This is a next-generation system capable of approaching what was previously impossible in loudspeaker systems. When it is used, there is no need for delay speakers, reflections in venues can be controlled and it is possible to manage the noise pollution problems.
