K2 System

The L-ACOUSTICS K2 System is the successor model to the V-DOSC that became the standard for the category of "line arrays" in the industry. This system has an advantageous weight of 56kg even in strict suspension load conditions. The perfect directivity control addresses the problems of reverberations and noise. (The vertical direction is a WST line source and the horizontal direction is PANFLEX, so it is possible to physically control the directionality.) SOUNDVISION makes it possible to predict sound fields. The K2 System was used at ceremonies for the Winter Olympics in Sochi in 2014.

System Configuration

	Product Name	Manufacturer	Model Number
Speaker	Variable curvature WST line source	L-ACOUSTICS	K2
Subbase	Flyable high power subwoofer	L-ACOUSTICS	K15B
Subwoofer	High-Power Subwoofer	L-ACOUSTICS	SB28
Amp	Amplified Controllers	L-ACOUSTICS	LA8JP
