

**Inter BEE 2019 Special Event
INTER BEE IP PAVILION
Real IP Device Connection Demo Details and Relay Technology Seminar
Program Determined!
November 13 (Wed) to 15 (Fri) at Makuhari Messe**

The Japan Electronics and Information Technology Industries Association (JEITA: Nobuhiro Endo, Chairman / Chairman of the Board of NEC Corporation) has today announced the details of the demo in the INTER BEE IP PAVILION and the relay technology seminar program. These are special events of Inter BEE 2019 to be held in Makuhari Messe (Chiba) over three days from November 13 (Wed) to 15 (Fri).

We will hold a real IP device connection demo to actually connect and operate real IP devices under three themes in a booth in Makuhari Messe Exhibition Hall 3. We will do this in cooperation with around 20 companies exhibiting at Inter BEE and the Alliance for IP Media Solutions (AIMS).

In addition, we will set up a 4K/HD-compatible full IP outside broadcasting vehicle with the cooperation of Nara Television Co., Ltd. This will allow visitors to directly check this in-house system. We will hold 26 technology sessions over three days in the adjacent relay technology seminar. These sessions will showcase live IP transmission + related technologies and actual introduction examples.

INTER BEE IP PAVILION will answer the questions of visitors in various ways about the current situation in which the speed of IP networks is rapidly increasing with exhibitions connecting exhibitor booths and actual IP devices, relay technology seminars, and forum keynote speeches.

*Advance reservations are not necessary. (There will be 40 places available on a first-come, first-served basis.)
